

ControlByNet Integrates Axis One-Click Service with i-flashback REMOTE: Faster and Easier Installation of IP Cameras for Integrators and Installers

ControlByNet, (CBN), a leader in cloud-based, hosted video security surveillance solutions, announced today the addition of the Axis One-Click Service to its hosted surveillance solution, i-flashback REMOTE. The addition of Axis' One-Click Service simplifies IP camera installation by allowing users to seamlessly connect Axis network cameras to i-flashback REMOTE regardless of Internet service provider, firewall settings or routers.

Atlanta, GA ([PRWEB](#)) November 10, 2011 -- [ControlByNet](#), (CBN), a leader in cloud-based, hosted video security surveillance solutions, announced today the addition of the Axis One-Click Service to its hosted surveillance solution, i-flashback REMOTE. The addition of Axis' One-Click Service simplifies IP camera installation by allowing users to seamlessly connect Axis network cameras to i-flashback REMOTE regardless of Internet service provider, firewall settings or routers.

"We've been asked by many of our smaller customers and integrators how to make the 2-6 camera installations a little easier. With the Axis One-Click service we can provide our smaller customers with a configuration free IP camera installation," said Ryan Strange, CEO of ControlByNet. "Integrators now have a faster and easier install and connection to our i-flashback REMOTE solution, whether we're hosting it for them or they're hosting it in-house. Just plug the camera in and it will connect directly to our hosted solution."

CBN's "no DVR-needed" product offerings include i-flashback LOCAL, i-flashback REMOTE and ip-LookOUT. i-flashback is an easy to use, 100-percent browser-based application installed as either an onsite solution, remotely hosted solution or any number of combinations. Both software solutions allow users to manage hundreds of remote cameras from a single browser; including Internet Explorer, Firefox, as well as the growing number of connected devices including Windows Mobile, iPhone, iPad, Blackberry and Android. i-flashback REMOTE, the hosted solution, provides web-based controls for hosting providers to manage multiple servers, users and accounts.

About ControlByNet (www.controlbynet.com)

ControlByNet provides the most advanced adaptable hosted and managed IP-based surveillance solution on the market. ControlByNet's advanced software is the cornerstone for the new security surveillance business model. By leveraging Software as a Service (SaaS), CBN's solution integrates seamlessly across its products creating limitless installation scenarios. The hierarchical nature of the software allows a single log-in with multiple levels of access from any (Internet) location which leverages existing enterprise resources. With years of development, their software solution is flexible, future-proof and designed to lead the industry. Product offerings include i-flashback LOCAL and REMOTE and ip-LookOUT, its guard monitoring application. While the i-flashback interface is as simple to use as a nanny cam, both versions of the software are sophisticated enough to manage hundreds of remote cameras from a single browser; including Internet Explorer, Firefox or even an iPhone or iPad. They primarily use AXIS for remotely hosted cameras but will expand to others as manufacturers provide IP cameras that are deemed highly efficient on the network.
