

## **ControlByNet Beta Testing Reseller-Hosted Surveillance Solution**

Norcross GA – February 17, 2010 – ControlByNet announces initial beta testing of its reseller-hosted version of their highly successful i-flashback REMOTE. This release (v5.0) allows resellers to remotely host and manage cameras for their customers. Integrators will be able to brand the solution as their own (white label) and manage all aspects for the customer. ControlByNet v5.0 also provides tools and private site access for sales, marketing and installation support.

ControlByNet's i-flashback REMOTE platform provides a hosted surveillance solution enabling end-users to house only the cameras on the premises. No other hardware is required and the customer accesses the live and archived video 24/7 from the Internet.

"i-flashback REMOTE is an ideal solution allowing integrators and resellers the ability to quickly and safely add a recurring revenue stream," according to Ryan Strange, founder of ControlByNet. "With the implementation of HTTPS and central authentication, integrators can feel comfortable with a safe and complete solution. It's such a good option for many customers; we already host hundreds of cameras just in our local area." He added the software development has required an investment in excess of \$1 million over several years and is appropriate for integrators of all sizes.

The 100% browser-based management and access provides flexibility for integrators to manage customers and keep systems running. Multiple-server support allows for seamless growth.

### About ControlByNet

ControlByNet offers software for complete IP-based surveillance systems, utilizing exciting technology and motion capture methods to provide an exceptional IP-based security system. Its primary products are i-flashback LOCAL and REMOTE, and ip-LookOUT, its guard monitoring application which allows guards to monitor up to 3 times the usual number of cameras. ControlByNet sponsors a forum on IP surveillance systems at [www.surveillanceforums.com](http://www.surveillanceforums.com).
