

## **ControlByNet Offers \$15 Wholesale Remote IP Video Surveillance**

Norcross GA – October 27, 2009 – ControlByNet announces wholesale pricing of its i-flashback REMOTE hosted video surveillance solution. With complete administration and viewing requiring only a web browser, ControlByNet provides the ideal option for surveillance solutions.

ControlByNet's i-flashback REMOTE platform was designed to fit the needs of those clients wanting to avoid the hassles and costs of supporting their own security infrastructure. Management and live or archived video is access from any browser and there is no equipment to manage onsite.

"This is a great opportunity for small and mid-level IT or security vendors to get into the surveillance hosting business," said Ryan Strange, founder and CEO of ControlByNet. "We do all the work on the back-end, and they get the recurring revenue. This version contains all the features of our award winning onsite product, but removes the cost of the server and concerns that go along with keeping a security server and cameras online. All that remains onsite are the cameras."

The browser-based management and access provides all the features available even on very expensive solutions including flexibility for video review and live viewing. The added features can assist companies with securing assets, employee safety, deterring criminal activity and providing an easy method to share video evidence should something occur.

The company has set up a page to provide information on this opportunity: [www.ControlByNet.com/wholesale](http://www.ControlByNet.com/wholesale) (This page is not available from the ControlByNet home page).

### About ControlByNet
