

ControlByNet Publishes Website Dedicated to Multifamily Security

Atlanta, GA - May 10, 2018 - ControlByNet LLC, a leader in cloud-based security surveillance, released a website dedicated to security surveillance specifically for the multifamily industry. As a member of the Atlanta Apartment Association, National Apartment Association and Gold Partner to Communities Associations Institute, ControlByNet has valuable experience dealing with the realities of community surveillance and access control.

The new site, www.weprotectmultifamily.com is aimed to go into more detail beyond pointing a camera and crossing fingers. It discusses risk management and how a system needs to be managed and run efficiently and accurately while protecting residents and the owner or management company. It covers network security and notes how often IP cameras and other network devices are not being secured and lack the latest security updates, which not only allow those devices to be targets of attack, but also many times those devices are tied to the office thereby furthering the possibilities of hacking. It covers options for security that were not available prior to true cloud technologies.

‘We have a lot of related experience with multifamily, not only direct but through partners as well’, states Ryan Strange, President of ControlByNet. ‘We want the communities to be safe for our customers by ensuring the system is run securely and operational when needed. So many of these other systems are dropped in a closet during construction and nobody knows anything about them - what kind of technology it is, what cameras are in use, is it updated/secure and then they find out it won’t work with the latest iPhone! We have more managers that call us after dejection at something they can’t utilize’.

ControlByNet is showcasing its latest solutions at the Atlanta Apartment Association show (www.atl-apt.org) on May 16th and at the National Apartment Association Show, Apartmentalize (www.naahq.org) June 14-15. As experts in the field, the partners are also available for consultation on security needs. For contact information please reference the website, email at ryans@controlbynet.com or call 770-565-5544.

About ControlByNet (<http://www.controlbynet.com>): ControlByNet LLC develops and provides solutions for cloud & managed video surveillance ideal for the multifamily industry.
